

**Name**

jstyle.js – various JQuery functions for styling

**Description**

This file contains javascript used in the styling of index.php. This javascript is responsible for the smoothscrolling that occurs when the 'next' button is clicked on index.php. It also responsible for checking the checkbox when the label proxy is clicked. And lastly, it causes the background image to change once the page scrolls past a certain point.

**Functions**

smoothscroll – This is used in index.php to animate automatic scrolling to certain places on the page. The page scrolls until the target element is at the top of the page, or until the end of the page is reached.

background transitions – This is used in index.php to transition backgrounds when the top of the page is scrolled past a certain point. When the page is scrolled down, a different background fades in. When the page is scrolled back up, the new background fades out and the original returns.

Sidebar – This is used in index.php to make a navbar appear on the left side once the top of the page is scrolled past a certain point. When the page is scrolled back up, the navbar fades out.

checkboxes – This function is used in index.php for checking checkboxes. When the proxy checkbox is clicked, this function toggles the actual checkbox.
